SOP-CC-011 Mammalian Cell Culture: Passaging HEK293 Cells

1. Scope
This SOP covers thawing, passaging and routine monitoring of adherent HEK293 cells in a Class II biological sa

2. Thawing Cells
Thaw the cryovial in a 37 C water bath for 1 to 2 minutes until a small ice crystal remains. Transfer the cells drop

3. Passaging Procedure
Passage cells at 80 to 90% confluence. Aspirate the medium and rinse once with PBS without calcium and magn

4. Reagent Storage
Store trypsin-EDTA aliquots at -20 C and avoid repeated freeze-thaw cycles. Thawed trypsin may be kept at 4 C

5. Suspected Contamination Response

If medium becomes cloudy, changes colour rapidly to yellow, or unusual particles or filaments are observed, do n
